Figure 4 shows the ability of PCI to deliver HRP into the cytosol. NHIK 3025 cells were treated with 3.2 ug/ml TPPS_{2A} and 1mg/ml HRP for 18 hours. The medium was then replaced with drug-free medium before exposure to the indicated light doses. HRP activity was measured [in intact cells (°) and in cytosol (•)] in intact cells (•) and in cytosol (°) separated from cytosol-free cell corpses (•) by electroporomeabilisation and a density centrifugation technique.
